

Diagnostic Healthcare is one of the largest independent sector companies delivering clinical imaging services. We pride ourselves on our high standards of quality and safety.

We are a partner to the NHS with over 15 years' experience of working across both Primary and Secondary care, supporting ICBs and NHS Trusts with imaging, reporting and staffing capacity to deliver Ultrasound services.

Why choose Diagnostic Healthcare to deliver your MRI needs?

Market leader providing state of the art technology: the first company to introduce wide bore GE and Siemens systems on a mobile unit

Core and local teams delivering consistency and continuity

Using the latest coils (Breeze/Air) to improve quality and reduce scanning time

Access to MRI training and career development

Providing AI reconstruction to improve quality and reduce scanning time

A large fleet of over 30 mobiles and relocatable units

Vendor neutral (latest GE, Siemens and Philips scanners)

Senior and experienced MRI radiographers

What our customers think of our service

DHC is an easy partner to work with being receptive to our needs of image quality and good customer focus and provide value for money

At present they provide Neuro and MSK, it is at an equivalent, if not in some cases better standard than our equivalent scanner

They are very amenable and happy to listen to what the department needs and tailor things to do that'

What our patients think of our service

The radiographer on duty put me at ease due to extreme anxiety and made me feel calmer and talked me through the whole process

Everyone I saw were all very nice. It was a pleasure to be in their capable hands. Thank you for your service

Staff extremely polite and friendly Great communication and explanation.

This year we are pleased to introduce the following latest technology

The first Siemens MAGNETOM Viato.mobile in the UK:

This latest scanner does not compromise on mobility and performance, offering a powerful 1.5T platform, cutting-edge AI to accelerate and enhance clinical performance and an intelligent assistance.

The new Philips Ingenia Ambition S wide bore MRI:

Based on its new, revolutionary fully sealed BlueSeal magnet and with dStream architecture, the system allows the most advanced MR imaging techniques with consistent scan results and maximum patient comfort.

GE AIR™ coils on all our fleet:

With overlapping, ultra-light, flexible coil elements, AIR™ Coils enable a simplified, faster workflow whilst maintaining excellent image quality, providing a greater experience for both patients and operators.
